NAME

mbtime − Translate between calendar time values and unix time.

VERSION

Version 5.0

SYNOPSIS

mbtime
[--calendar-time=year/month/day/hour/minute/second {-Tyear/month/day/hour/minute/second}
--epoch-time=time_d {-Mtime_d}
--help {-H}
--verbose {-V}]

DESCRIPTION

The program **mbtime** converts time values between unix time (seconds since 1970/01/01 00:00:00.000000) and calendar time (e.g. 2008/006/05/17/24/32.000000). Unix time is also known as POSIX time or epoch time, and are typically represented in **MB-System** documentation (and source code) as "time_d" values. The input time is set using the command line arguments **−M***time_d* for epoch seconds and **−T***year/month/day/hour/minute/second* for calendar time. The output time (in the form not specified as input) is written to stdout.

OPTIONS

−−help −H

This "help" flag cause the program to print out a description of its operation and then exit immediately.

−−epoch−time=time_d −Mtime_d

Sets the input time to be *time_d* in unix time, which is defined as seconds since 00:00:00.000000 01 January 1970. If **−M** is specified, this time will be converted to calendar time and output to stdout in the form

yyyy/mm/dd/hh/mm/ss.ssssss

−−calendar−time=year/month/day/hour/minute/second −Tyear/month/day/hour/minute/second

Sets the input time to be *year/month/day/hour/minute/second*. If **−T** is specified, this time will be converted to *time_d* in epoch (Unix) seconds, which are seconds since 00:00:00.000000 01 January 1970. The *time_d* value will be output to stdout.

−−verbose −V

Normally, **mbtime** only prints out the converted time. If the **−V** flag is given, then **mbtime** works in a "verbose" mode and also outputs the program version being used.

EXAMPLES

Suppose one wishes to convert the current time (06 June 2008 18:37:14.000000) to unix seconds. The following command:

mbtime −T2008/06/06/18/37/14.0

yields the following result:

1212777434.000000

Suppose on wishes to convert the unix time 1212777434.0 to calendar time. The following command:

mbtime −M1212777434.0

yields the following result:

2008/06/06/18/37/14.000000
